

Contents

1	Real numbers and sequences	9
1.1	Constructing the real numbers	9
1.2	A first look at sequences	15
1.3	The Archimedean Property	18
1.4	Series	19
1.5	Properties of sequences and series	21
1.6	Subsequences and the Bolzano–Weierstrass Theorem	27
2	Introduction to Topology	31
2.1	The closure of a set. Closed and open sets.	31
2.2	Compact sets	35
2.3	Continuity	36
2.4	The Intermediate Value Theorem	41
2.5	Continuous images of compact sets and intervals	43
2.6	Sequences and convergence on the Euclidean plane	45
3	Differential Calculus	49
3.1	The derivative	49
3.2	The Mean Value Theorem	52

3.3	How are derivatives useful in finding maxima and minima?	56
3.4	Rules for differentiation	57
3.5	Taylor's Theorem	59
3.6	Power series expansions of the elementary functions	64
4	Integral Calculus	67
4.1	The Riemann integral	67
4.2	The Fundamental Theorem of Calculus Part I (a telescoping integral)	72
4.3	Change of variables for integration	73
4.4	Averages and the MVT for Integrals	74
4.5	Accumulation and the Fundamental Theorem of Calculus Part II	75
4.6	Methods for finding antiderivatives	78
5	Discrete dynamical systems	83
5.1	Iteration of functions	83
5.2	Commensurability and the Euclidean algorithm	86
5.3	Representing real numbers	88
5.4	Fractals	90
5.5	Logistic map	92
	Appendix A Proofs and mathematical writing	95
